## Department of Physics

Survey of Undergraduate Alumni: 2013

The following outlines the results of a survey conducted between August $8^{\text {th }}$ and November 5th, 2012. A total of 33 undergraduate alumni from the Department of Physics were invited to participate. A total of 10 students ( $30 \%$ of the invitees) completed the survey.

## F. Overall Evaluation

## 4. What were some of the strengths of your program?

- high quality professors - approachable professors - small class sizes
-small classes, tight-knit community, professors excited to teach and always willing to help.
Close knit department with friendly people. Profs have open door policy and always available.
Independent learning, small class size, supportive atmosphere
It's a small department so there was an ideal teacher to student ratio.
Small classes, great connection with professors
The faculty and staff was friendly, approachable, and accomidating. There were lots of great opportunities that you typically would not get at an undergraduate level.
The professors were always available to answer questions and/or offer advice. I was able to respond very well to most of the professors' teaching styles and material was well explained. Textbooks were very supportive in my learning.

## 5. In what ways might the program be improved?

-Having additional professors would allow for more variety with the courses so they can be offered annually as opposed to some which are offered bi-annually. Of course this is subject to the demand and enrollment.
Clean and organize the labs
Expand the number of courses offered.
No 8am Quantum Mechanics.
Offer more applied physics programs as opposed to just theory. This allows students to enter more engineering based careers as opposed to the usual 'high school teacher' or 'continue with research' routes. Also, instead of taking essentially two years of differential equations, require a math course in vector calculus so that EM isn't so difficult.
Physics and biophysics almost exclusively focused on condensed matter and molecular systems, with few offerings in Newtonian biomechanics or fluids.
There should be an astronomy course offered for physics majors.

## 6. What did you learn from the faculty members and courses in your program that you now consider to be particularly valuable/rewarding?

- a greater understanding of how the universe works - how to solve problems
-I learned a variety of analytical and computational skills which I have improved through my own research. -The faculty members provided me with the knowledge I need to develop stronger skills to pursue a career in academia.
Computer programming, electronics theory, physics
Everything they taught me.
I learned some strategies for teaching physics as well as different problem-solving strategies that I can model for my students. I also learned how to think critically and how to write a proper lab report (as well as model the format of a lab report). All of these things are useful to me as a high school physics teacher.

Problem solving skills, how to write and speak scientifically
7. Do you have any further comments about your program?

Clean and organize the labs!
I loved it and very much enjoyed my time taking Physics at Brock. Because the program was small, the faculty and students formed a close community, which provided many valuable experiences.
It was fun!
Thank you for the excellent education!
They had an amazing undergraduate program in physics. I think it is highly underrated.

## G. Life After Brock: Employment

## 3. If employed, what is your current occuptation?

- teacher and tutor

College instructor.
Currently, I'm an occasional teacher looking for a permanent position. Depending on the day and what I'm substituting for, I'm able to utilize the skills, abilities, and knowledge that I gained from my program to some extent. Once I get a permanent position I will use those skills, abilities, and knowledge to a great extent.
